

YADA (Yet Another Drawing App) User Instructions

Help Guide:

Welcome to YADA, a versatile digital canvas designed for both individual creativity and interactive group collaboration! Whether you're brainstorming solo or joining minds in an online session, this app offers a seamless and intuitive experience to bring your ideas to life.

Welcome to the Homepage

Upon opening the app, you will find four main options:

Offline Mode: For solo creative sessions. Your private space to sketch, plan, or brainstorm.

New Canvas: For hosting group sessions, the host creates the new canvas and shares the session id generated to others.

Open Previous: Instantly access and continue from your last (online) session, ensuring no idea is lost.

Join: Collaborate with others by entering a unique session ID. Ideal for team projects and group sessions.

Navigating to the Canvas

After selecting your mode, you'll be taken to the canvas - your creative playground. Here's how to navigate and use its features:

Lower Toolbar - Your Artistic Tools:

It has six buttons:

Pen: First in line, this tool allows you to draw or write. The default color selected is black. Select color from the palette (6th button) and adjust thickness with the slider (5th button).

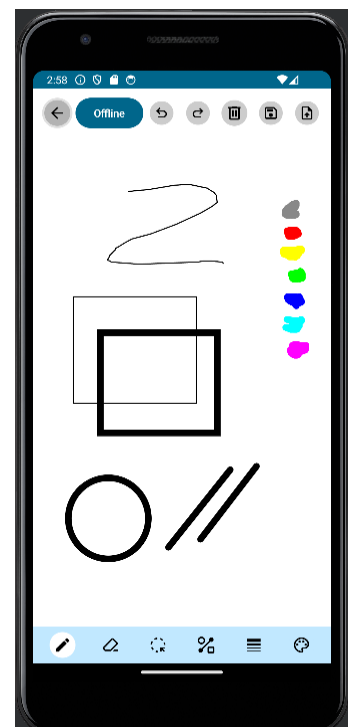

Eraser: Positioned as the second button, for erasing any part of your drawing or writing.

Drag Tool: Third button, used to select and move shapes around the canvas. Tap near a shape to highlight the edges in red and drag the shapes around to your desired location.

Shapes Tool: Fourth button, offering a variety of geometric shapes like rectangles, circles, and lines. Select the button, choose the shape and drag your finger on the canvas to create and adjust the size of the shape.

Thickness Slider: Fifth button, adjust the width of your pen for precise control.

Color Palette: The final button, presenting a wide range of colors to enhance your artistic expression.

Upper Toolbar - Your Control Panel:

Back Button: Takes you back to the Homepage.

Session Mode/ID Indicator: Displays your current mode (Offline) or session ID for online collaborations. This is the id the host (who creates the new canvas) shares with others to join.

Undo/Redo Buttons: Correct your actions step-by-step. In online mode, this only affects your contributions.

Delete All: Clears the entire canvas, giving you a clean slate.

Save Option: Save your canvas as a PDF. Zoom in for a detailed area or zoom out to capture the entire canvas. Use the two-finger pinch gesture for zooming.

Import Background Feature (Exclusive to Offline Mode): Import any JPG image to set as your canvas background. You could use graph paper, notebook lines, any other image file.

Key Points to Remember

Mode Differences: Online mode is for group collaboration, while offline mode is tailored for individual use. Only in offline mode can you import a custom background.

Respect in Collaboration: In online sessions, you are only able to modify or undo your own drawings, maintaining a harmonious collaborative environment.

Explore these features to fully utilize the potential of our collaborative whiteboard. Let your creativity flow and enjoy the experience. Happy drawing!!
